Derivative
uses of data
(AI / BI) **are**
exploding.

Marc Benioff ✓
@Benioff

AI's true gold isn't in the UI or model—they're both commodities. What breathes life into AI is the data & metadata that describes the data to the model—just like oxygen for us. The future's fortune lies in our data. Yes, Data is the new gold! ❤️

Data Quality is **everyone's responsibility.**

AI/BI success hinges on **Data Quality.**

73%

of executives are **unhappy** with their data quality

48%

of executives admit to having made **bad decisions** based on bad data in the last 6 mos*

**that they know of*

83%

of enterprises now have **CDOs****

***compared to 12% in 2012*

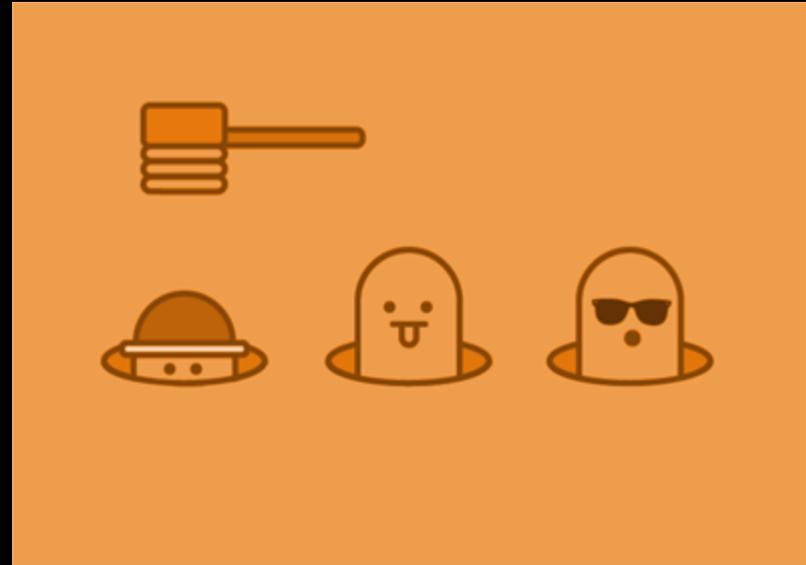

CDOs

are prioritizing support for derivative uses now: **Security, Discovery, & Quality**

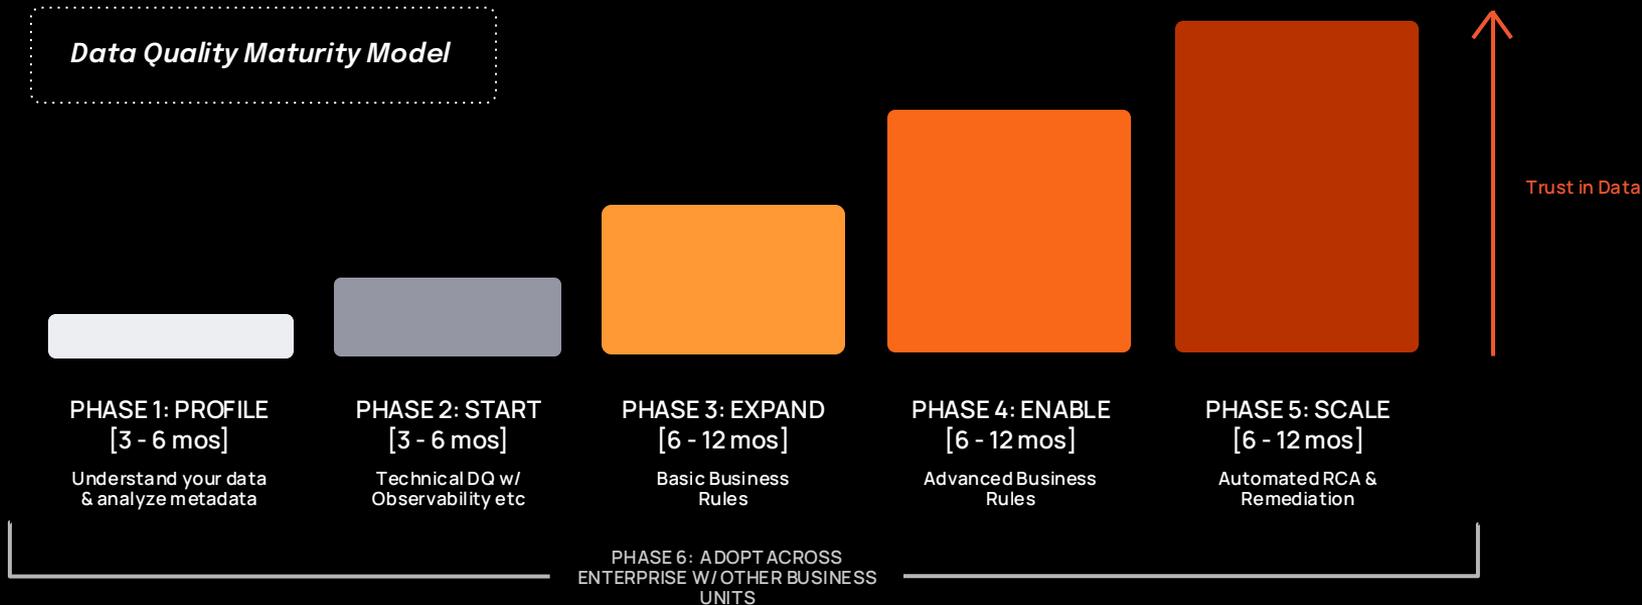

Enterprise DQ initiatives take a minimum of **2 years** and **7 figure investment** to implement.

Traditional approaches rarely get to **business maturity** because they are non-systematic, reactive, manual and error-prone.

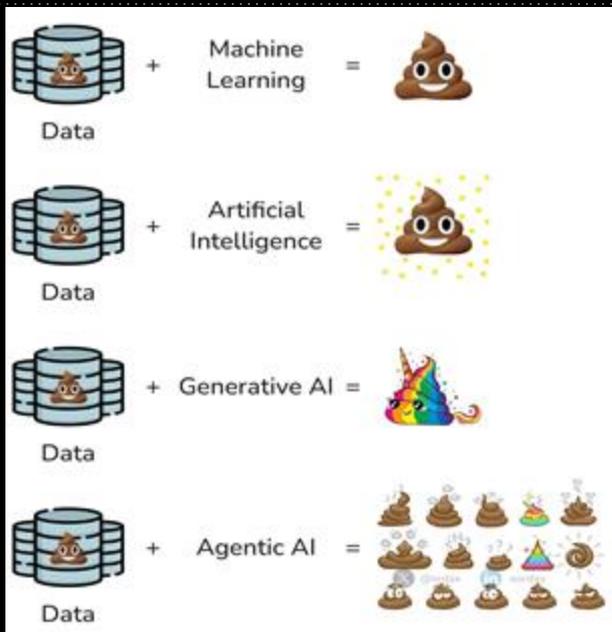

Why?

Data Quality Maturity Model

AI is adding serious fuel to the fire.

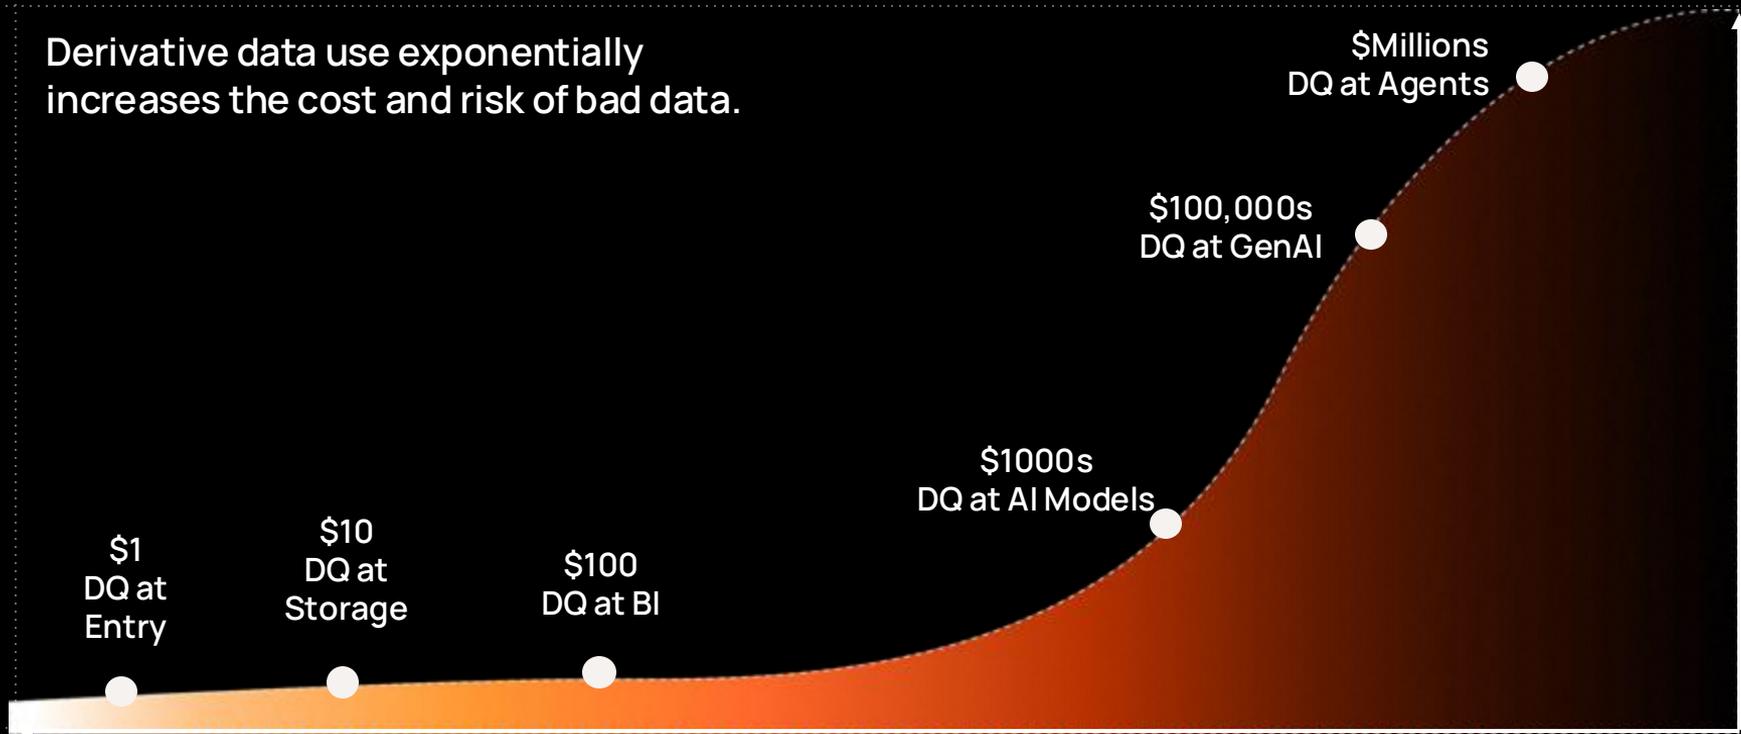

Source: Eduardo Ordax, AWS

In the pre-AI Era,
bad data cost the
average enterprise
\$15M/YR.

In the age of AI, that
figure is **at least**
HUNDRED-FOLD.

AI success hinges on **data quality**.

Derivative data use exponentially increases the cost and risk of bad data.

Qualytics reduces enterprise adoption of DQ to
6 months or less and a fraction of the cost.

Qualytics delivers **enterprise data quality** at scale.

■ Proactive

95% of rule management automated through ML & AI

■ Deeper Anomaly Detection

ML models run on raw data and check across tables and datastores

■ Simple No-Code UI

Allows easy collaboration between technical & business teams

■ Faster Remediation

Delivers the exact rows where anomalies were found and powers remediation workflows

Our 4-step process to Data Confidence

Qualytics reduces enterprise adoption of DQ to 6 months or less and a fraction of the cost.

MAPFRE USA: Case Study

The challenge

- MAPFRE USA needed to scale data quality across quote data that sat in legacy + cloud systems, with millions of records – without heavy engineering dependence
- Existing tools (e.g., Great Expectations) required Python expertise, limiting business participation and slowing outcomes
- Strict security and PII requirements disqualified many vendors
- Small governance team needed to make a high business impact, and proactively catch issues before they emerged downstream downstream damage

The solution: **Qualytics**

Secure, AI-assisted, business-friendly platform that unifies governance, quality checks, anomaly detection, and remediation workflows

- **Faster issue detection and remediation:** Identify anomalous records early in the quoting process to catch issues before they move downstream and impact underwriting accuracy
- **Business users can co-own data quality:** No-code rule authoring so business users can create & adjust rules to reduce bottlenecks and strengthen alignment between business and data teams
- **Secure and modern framework:** Deploy privately to meet MAPFRE's compliance & PII controls and have the ability to scale across more use cases and business units
- **Immediate time-to-value:** Shift from manual monitoring to broad coverage and immediate anomaly detection in 1 week vs 9-12 months

How MAPFRE uses Qalytics

Tracking Key Data Metrics

Volume, distribution, and schema changes are tracked to maintain data integrity in dynamic environments.

ML-Driven Anomaly Detection

The platform uses AI to automatically detect anomalies in data across batch and streaming pipelines.

Proactive Failure Identification

Silent data failures are detected early to prevent inaccurate data from affecting business reports and decisions.

Continuous Data Assessment

Data is continuously monitored to ensure freshness, completeness, and consistency throughout processing.

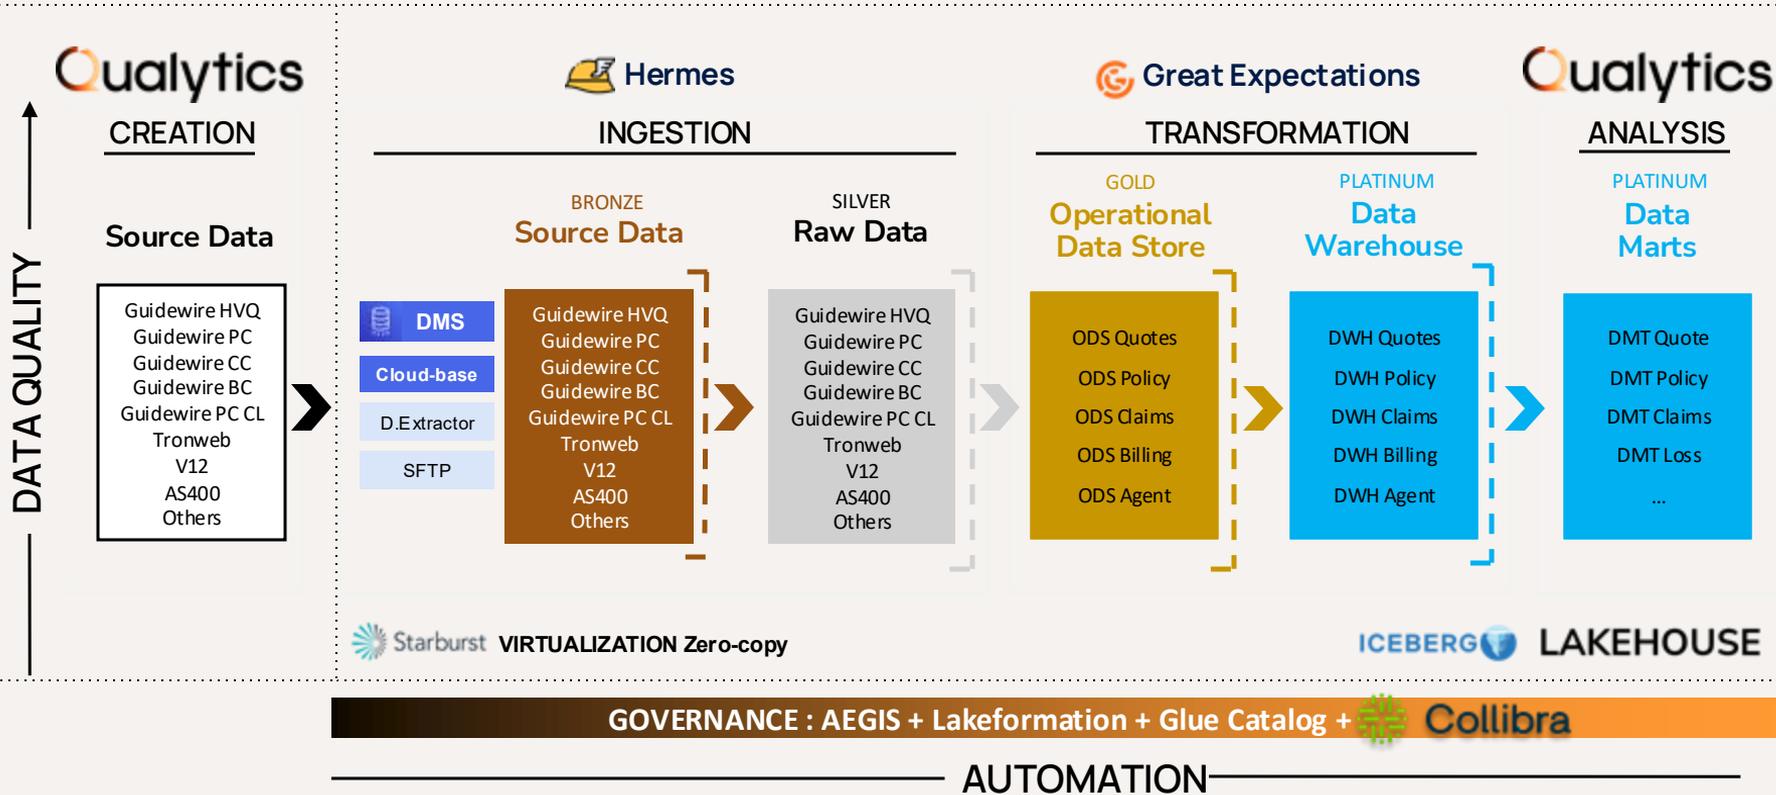

Quality checks span the data lifecycle

	Qualytics	Hermes + Great Expectations		Qualytics
Accuracy	✓	X	X	✓
Completeness	✓	✓	✓	✓
Validity	✓	X	✓	✓
Uniqueness	✓	✓	✓	X
Timeliness	✓	✓	✓	X
Consistency	✓	X	X	✓
Volumetrics	X	X	X	✓

Quality and Automation

Results with Qalytics: Fast Remediation, Lower Cost, Measurable Value

Reduce Manual Work

18,355 rules

Automatically generated
inferred rules across quote
data vs hours of manual
rule writing

Improve Eng Efficiency

3,000 hrs

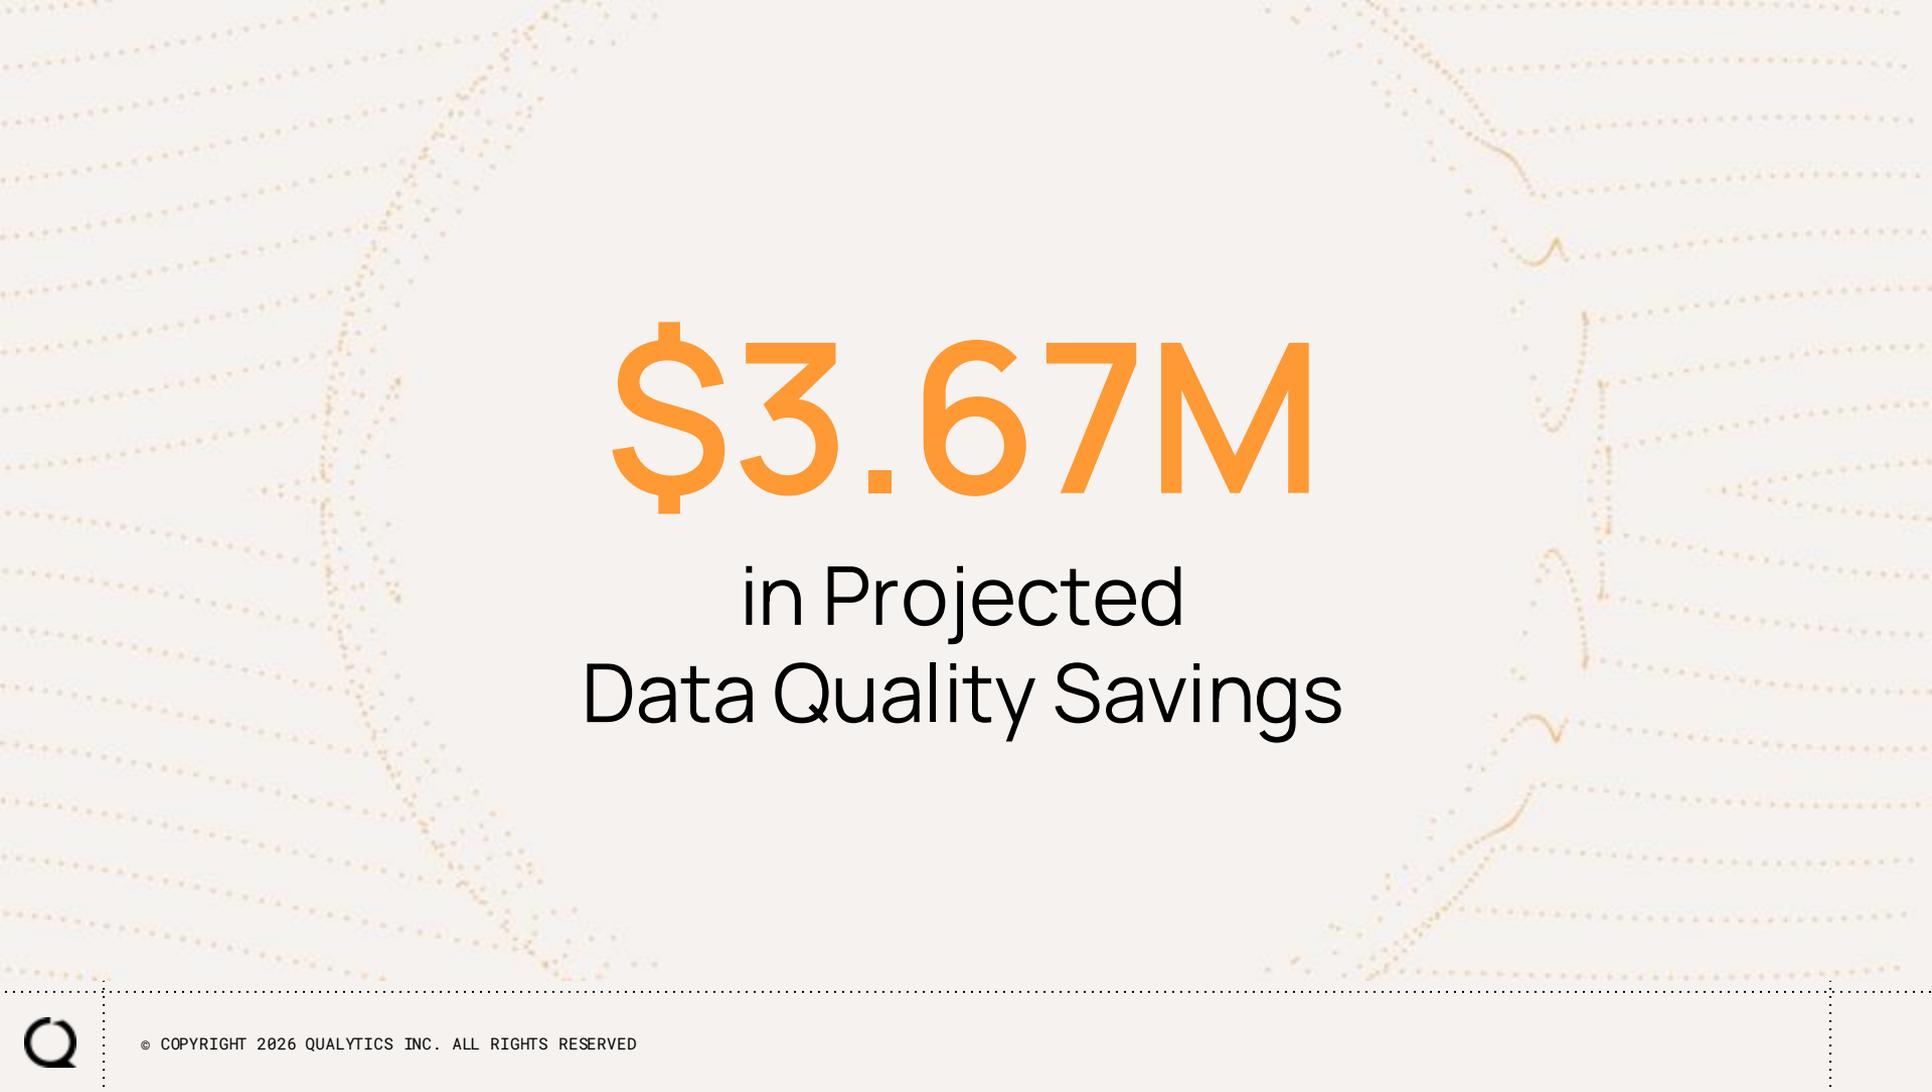

Eliminated hours of
engineering work by
transforming complex JSON
data into 48 structured
tables

Lower Operational Cost

45,838 hrs

Saved via AI-powered rule
inference

\$3.67M

in Projected
Data Quality Savings
